DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Taiwan on 8/30/02. It is noted, however, that applicant has not filed a certified copy of the Taiwanese application as required by 35 U.S.C. 119(b).

Specification

2. The disclosure is objected to because of the following informalities: On page 6, lines 3-4, a "motion sensing switch 21d" is referred to as being in Fig.4 of the drawings. It appears that the "motion sensing switch" is labeled as "21e" in Fig.4. Element "21d" in Fig.4 is the "receiving socket".

Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/635,701

Art Unit: 2875

5. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over LEE (6,443,589) in view of DIETZ et al. (4,922,355). Lee shows in Fig.2; a transparent cup body "32" with two electric terminals "48,46", a cup base "14" with a receiving socket "70,72", a battery group "80", a low-level triggered circuit "74". Lee does not show the illuminator in the cup base or the electrical components on a circuit board. Dietz et al. shows in Fig.1 that it is well known in the art to place the electrical components on a circuit board with the illuminator in the cup's base for the purpose of isolating the electrical components from the liquid holding portion of the illuminated cup. It would have been obvious to one of ordinary skill in the art at the time of the invention to place the illuminator and electrical components of Lee in the cup base portion "14" as shown by Dietz et al. for the purpose and advantage of isolating the electrical components from the liquid holding portion of the illuminated cup. Re claims 2-3, note Lee discloses that the light bulbs "56" can be light emitting diodes with special effect mechanisms. Re claim 4, note that switch "76" in Fig.2 of Lee may be a motion switch such as the one shown in Fig.4 of Lee.
